Control

Radix®

Genux® OA

UTX®

All products of Ambroise are designed according to the 3C philosophy. This design philosophy states that a good prosthesis or orthosis must satisfy to at least three global requirements: good Cosmetics, maximum Comfort and optimum Control by the user. The Wilmer® orthoses comply with the 3Cs. Also Ambroise's lower extremities products, the Radix®, the Genux® OA and the UTX® have been designed according to this philosophy. This ensures a strong focus on the user and products that fit the body.

# WEO®

The Wilmer® Elbow Orthosis makes it possible to flex the (partially) paretic arm. Functionality in two positions and controlled arm swing while walking with the orthosis.

Indications:

- After CVA
- Plexus brachialis laesion
- Oedema
- Congenital deformations / malformations

# WCO®

The Wilmer® Carrying Orthosis neutralises the painful (sub)luxation of the shoulder joint by means of a lever principle. Excessive oedema is remedied with this orthosis.

Indications:

- After CVA
- Plexus Brachialis laesion
- Postoperative
- Oedema

# ADWO®

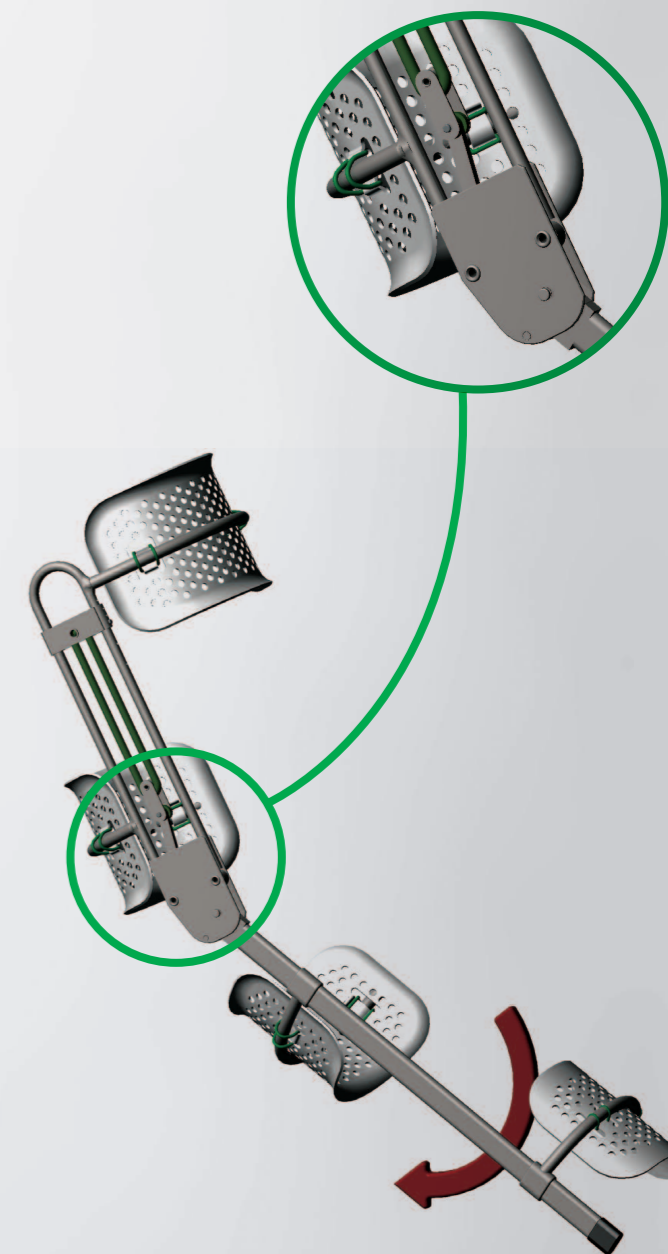

The Ambroise® Dynamic Wrist Orthosis brings the dropping hand into a functional cock-up position. Adjustable spring tension brings the hand to dorsal flexion. Active palmar flexion remains possible.

Indications:

- After CVA
- Nervus Radialis laesion
- Dropping hand

# WSO®

The Wilmer® Stretching Orthosis gives active support to the arm in extension. Contractures can be prevented or even treated because of the adjustable spring tension.

Indications:

- After CVA
- Nervus Radialis Laesion
- Congenital deformations / malformations
